

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listing, of claims in the Application.

LISTING OF CLAIMS

Claims 1-44 are previously cancelled.

45.(currently amended) In an automated data storage library comprising a plurality of storage shelves and operational elements, said operational elements comprising at least one data storage drive, and at least one robot accessor configured to transport data storage cartridges between said storage shelves and said at least one data storage drive, a system comprising:

a network; and

electronic devices, a plurality of said electronic devices each comprising:

a network interface to said network;

an electronic persistent visual display mounted at said electronic device,

said electronic persistent visual display having an input, said electronic persistent visual display configured to provide a visual label display which persists indefinitely, until updated by an input signal at said input;

at least one said operational element for operating said automated data

storage library, an operational element for at least one said electronic device

comprising at least one of said at least one data storage drive and said at least one robot accessor; and

a processor configured to operate said at least one operational element:
said processor configured to store information regarding at least one of
hardware, software and firmware of said at least one operational element and said
processor; and

 said processor configured to, in response to a predetermined state, provide
 an update input signal at said electronic persistent visual display input for display
by said electronic persistent visual display, said update input signal comprising
 selected said information regarding at least one of hardware, software and
firmware of said at least one operational element and said processor stored by said
processor, said update signal to update said visual label display of said electronic
 persistent visual display.

46.(previously presented) The system of Claim **45**, wherein said predetermined state
of said processor of said at least one electronic device comprises a power-on and/or reset
of said electronic device.

47.(previously presented) The system of Claim **45**, wherein said processor of each of
said plurality of electronic devices comprises a programmable computer processor and
said predetermined state of said processor comprises completion of an update to
computer readable program code of said programmable computer processor.

48.(previously presented) The system of Claim **47**, wherein said processor of each of said plurality of electronic devices additionally is configured to update said information regarding said at least one operational element and said processor stored by said processor with status information related to said update to computer readable program code of said programmable computer processor, and said processor update signal selected information comprises at least said status information.

49.(previously presented) The system of Claim **48**, wherein said processor of each of said plurality of electronic devices comprises programmable logic and said predetermined state of said processor comprises completion of an update to said programmable logic.

50.(previously presented) The system of Claim **49**, wherein said processor of each of said plurality of electronic devices additionally is configured to update said information regarding said at least one operational element and said processor stored by said processor with a version number of said update to said programmable logic, and said processor update signal selected information comprises at least said version number of said update to said programmable logic.

51.(previously presented) The system of Claim **45**, wherein said predetermined state of said processor comprises a state achieved in response to an indication of completion of an engineering change to said electronic device.

52.(previously presented) The system of Claim **51**, wherein said processor of each of said plurality of electronic devices additionally is configured to update said information regarding said at least one operational element and said processor stored by said processor with an engineering change number of said engineering change to said electronic device, and said processor update signal selected information comprises at least said engineering change number of said engineering change.

Claim 53 was previously cancelled.

54.(previously presented) The system of Claim **45**, wherein said processor of each of said plurality of electronic devices additionally is configured to update said information regarding said at least one operational element and said processor stored by said processor with status information related to said change to said at least one operational element, and said processor update signal selected information comprises at least said status information.

55.(previously presented) The system of Claim **45**, wherein said predetermined state of said processor comprises a state achieved in response to a signal received at said network interface.

56.(previously presented) The system of Claim **55**, wherein said processor of each of said plurality of electronic devices additionally is configured to select said information stored by said processor in accordance with said signal received at said network interface.

Claim 57 was previously cancelled.
